Structure Tag Lab Developer Journal

Zhihao Cao

In the Structure Tag lab assignment, I have created a web site for describing a new graphics card. The content is simple. The first page is overall of the graphics card and the second page is the detail description.

The skills I learned:

1. HTML 5 is so similar to HTML/XHTML. What different I found currently is that the HTML5 is more specific on the use of syntax and more advanced tags. Beside the HTML 5 should refer a reset CSS file and a condition sentence to decide if IE 9.

2. The extremely useful menu is the most valuable thing I learnt in this assignment.

Problem:

I know my color design is so ugly. It is really a problem for me that how to make a page better looking. I want to add a border shadow with luster effect for the "container" div. But I have no idea how to make it.

Also, I want to make the border of the table look like 3D effect, but after I add the border inset, it is not looks what I want.
